

SRI SRINIVASA HOSPITAL

Website Feature Guide & Stability Checklist

Badvel · Nellore Road · Andhra Pradesh 516227
Frontend Demo · Next.js · LocalStorage / JSON

This document lists every section of the website, what is stable and working today, how to test it, and what is demo-only versus ready for real patient operations.

Project path	C:\Users\windows\sri-srinivasa-hospital
Local URL	http://localhost:3000
Start command	npm run dev
Admin password	admin123
Patient OTP	123456

1. How to Open the Website

1. Open PowerShell
2. Run: **cd C:\Users\windows\sri-srinivasa-hospital**
3. First time only: **npm install**
4. Start: **npm run dev**
5. Browser: **http://localhost:3000**
6. Stop server: **Ctrl + C**

Important: Frontend-only demo. Appointments and CMS data are stored in the browser (localStorage). Clearing browser data removes demo records. No real SMS/email/server is connected.

2. Global Features (All Pages)

Feature	Status	How to use
Emergency banner	WORKING	Top red bar · Call Now / Ambulance dial phone
Main navigation	WORKING	Header links + More menu
English / Telugu	WORKING	Language button in header
Dark / Light mode	WORKING	Sun/moon icon · remembered
Accessibility	WORKING	Large text + High contrast toggles
Floating WhatsApp	WORKING	Green button · opens prefilled message
Floating Call	WORKING	Red phone · emergency number
Sticky Appointment	WORKING	Opens /appointment
AI Chatbot	WORKING	Bot icon · demo answers + typing
Footer	WORKING	Links, phones, email, address
Toast notifications	WORKING	After forms / bookings

Chatbot topics: Book Appointment, Doctor Availability, Emergency, Hospital Timing, Fees, Location, Services, Insurance.

3. Public Website Sections

[Home /](#)

Hero, counters, services preview, doctor preview, explore cards, testimonials, CTA. Book / emergency / WhatsApp buttons work.

[About /about](#)

Hospital story, mission, vision, values, address. Working.

[Doctor /doctor](#)

Full profile, qualifications, experience, awards, certificates, gallery, fees. Working.

[Services /services](#)

All specialty cards with icons and feature lists. Working.

[Gallery /gallery](#)

Filterable gallery + lightbox. Paths from JSON / CMS. Working.

[Facilities /facilities](#)

ICU, diagnostics, OPD, pharmacy, ambulance, lounge. Working.

[Testimonials /testimonials](#)

Patient reviews with ratings. Demo content. Working.

Insurance /insurance

Partner list + claim guidance. No real claim system. Working as info page.

Health Packages /health-packages

Packages, prices, inclusions, book CTA. Working.

Blog /blog

Articles + category filters + article detail pages. CMS editable. Working.

FAQ /faq

Accordion FAQs + SEO schema. Working.

Contact /contact

Phones, WhatsApp, map, validated form. Email success is simulated. Working as demo.

Privacy /privacy

Policy text page. Working.

Terms /terms

Terms of use page. Working.

404 page

Any invalid URL shows branded 404 with home/appointment links. Working.

4. Appointment Booking (Core Feature)

URL: `/appointment`

Item	Status	Notes
Patient name / phone / email	WORKING	Zod validation
Age / gender / problem	WORKING	Required fields
Doctor selection	WORKING	Dr. Varaprasad only
Date picker	WORKING	Next 60 days
Time slots M/A/E	WORKING	Morning, Afternoon, Evening
Booked slots disabled	WORKING	After successful booking
Doctor calendar panel	WORKING	Interactive availability demo
Success animation	WORKING	On-screen confirmation
SMS confirmation	SIMULATED	Toast only — not real SMS
Email confirmation	SIMULATED	Toast only — not real email
Data storage	LOCAL ONLY	Browser localStorage

How to test: Fill form with a 10-digit Indian mobile (starts with 6–9), pick date + open slot, submit. Re-open same slot — it should be disabled.

5. Patient Login & Dashboard

Item	Status	How to use
Login page	WORKING	<code>/patient/login</code>
Send OTP	SIMULATED	Toast shows OTP 123456
Verify OTP	WORKING	Only 123456 accepted
Dashboard access	WORKING	<code>/patient/dashboard</code> after login
Upcoming appointments	WORKING	Matches phone used at booking
History	WORKING	From localStorage
Reports	DEMO DATA	Fixed sample reports
Invoices	DEMO DATA	Fixed sample invoices
Logout	WORKING	Clears patient session

Tip: Book an appointment with phone 9876543210, then login with the same phone + OTP 123456 to see that booking.

6. Video Consultation

Item	Status	Notes
Book video visit	WORKING	<code>/video-consult</code> form (type=video)
Join meeting room	WORKING	<code>/video-consult/meeting</code>
Camera preview	WORKING	Needs browser camera permission
Mute / Video toggle	WORKING	Local device only
Chat	WORKING	Demo doctor auto-reply
Screen share	DEMO UI	Visual toggle only
Leave meeting	WORKING	Returns to video page

Item	Status	Notes
Real doctor call	NOT REAL	No multi-user WebRTC call

7. Admin Portal

URL: **/admin** · Password: **admin123**

Module	URL	Status	What works
Login	/admin	WORKING	Demo password gate
Overview	/admin/dashboard	WORKING	Stats + recent appointments
Appointments	/admin/appointments	WORKING	List, filter, status, chart, seed demo
Analytics	/admin/analytics	WORKING	Charts W/M/Y — demo numbers
Health Tips CMS	/admin/blog	WORKING	Create / edit / delete articles
Gallery CMS	/admin/gallery	WORKING	Add / delete / replace / drag reorder
Doctor CMS	/admin/doctor	WORKING	Name, bio, fees, photo path, etc.
Logout	Header button	WORKING	Clears admin session

8. Demo for Owner vs Ready for Real Patients

Use this table for stakeholder review. **Demo Ready** = safe for presentation. **Production Ready** = real clinical/patient operations (needs backend + compliance).

Capability	Demo Ready now?	Production Ready?	What is still needed for production
Marketing pages (Home, About, Services...)	YES	YES*	Real photos, final copy, domain, hosting
SEO / schema / sitemap	YES	YES*	Set NEXT_PUBLIC_SITE_URL + real domain
WhatsApp / Call buttons	YES	YES	Confirm final numbers
Appointment form UI	YES	NO	Backend API, staff notifications, DB
Slot calendar simulation	YES	NO	Real schedule engine + doctor calendar
SMS confirmation	DEMO ONLY	NO	SMS gateway (e.g. MSG91)
Email confirmation	DEMO ONLY	NO	Email service (SMTP/SendGrid)
Patient OTP login	DEMO ONLY	NO	Real OTP provider + secure auth
Patient reports / invoices	DEMO DATA	NO	Hospital HIS / billing integration
Video consultation	UI DEMO	NO	Telemedicine platform / WebRTC + consent
AI chatbot	FAQ DEMO	PARTIAL	Optional real AI API + medical disclaimer
Admin CMS	YES (local)	NO	Authenticated server CMS + roles
Analytics revenue	DEMO DATA	NO	Real analytics + accounting
Insurance cashless	INFO PAGE	NO	TPA / insurer network integration
Data privacy / security	BASIC HEADERS	NO	HTTPS, server validation, policies, audit

* Marketing pages can go live for branding after replacing images and hosting. Do **not** treat appointment bookings as real clinical records until a backend is connected.

9. Demo Credentials & Contacts

Item	Value
Admin password	admin123
Patient OTP	123456
Hospital phones	8121864863 · 9944867733 · 8249432026
Doctor	Dr. Varaprasad Venkata Sumanth (MBBS, DNB, FSM, CCEBDM)
Address	Sri Srinivasa Hospital, Nellore Road, Badvel, AP 516227
WhatsApp message	Hello Doctor, I would like to book an appointment.

10. Suggested 10-Minute Test Path

1. Home — check counters, dark mode, Telugu, WhatsApp button
2. Appointment — book a slot with phone 9876543210
3. Patient Login — same phone + OTP 123456 — confirm booking appears
4. Video Consult — Join Demo Meeting — mute / camera / chat
5. Admin — password admin123 — open Appointments — change status
6. Admin Blog — create a health tip — open /blog to verify
7. Chatbot — ask “fees” and “emergency”
8. Contact form — submit and confirm success toast

11. Replacing Images

All images are path-based under **public/assets/images/**. Update paths in **src/data/*.json** (especially images.json, doctor.json, gallery.json). Do not hardcode image URLs in React components. Hero building placeholder: **public/assets/images/hospital/building.svg**

12. Recommended Next Steps for Go-Live

1. Replace placeholder images with real hospital and doctor photos
2. Review all medical and fee wording with the doctor
3. Push project to GitHub and host on your preferred platform
4. Connect a backend for appointments, auth, SMS, and email
5. Add real domain, SSL, and production environment variables
6. Complete privacy / clinical compliance review before storing real patient data

Summary: The website is stable for demo, training, and stakeholder review. Public content pages and UI flows are production-quality frontends. Clinical transactions (real bookings, OTP, telemedicine, billing) remain simulated until a backend is connected.
